

Light Commercial Product Updates : June 2020

eTPB2013 | June 1, 2020

TTA120 and 240 Dual Compressor EM Announcement

Odyssey 10 ton and 20 ton *Dual Compressor Electromechanical* units are being discontinued. Units in inventory can still be sold, all new orders from the factory should be changed to have ReliaTel controls.

•TWA Heat Pumps and other tonnage TTA units are not impacted by this change

•Remember... Symbio controls are planned for September launch, all units will have Symbio controls at that time.

WHY THIS MATTERS TO YOU:

ReliaTel units have all of the functionality of Electromechanical units and can be used with all of the same TWE air handlers. The Conventional Thermostat Interface (CTI) is available for customers who prefer a thermostat over the available zone sensors.

ACTION NEEDED:

If you have any backlog that includes TTA1204*D & TTA2404*D units make plans to get these orders in now or change to ReliaTelcontrols

TIMING:

Production of the electromechanical units will stop in June. 10 & 20 ton electromechanical units that remain in inventory can still be sold and will remain available in mTOPSS for the time being.
