

# Launching Awair® Element™

eTPB2121 | October 4, 2021

## IMPORTANT DATES

**Homeowner Promotion Period:**

**Oct. 25–Nov. 22, 2021**

**Promo Code:**  
**TRAWAIR2021**

Trane® has collaborated with Awair® to offer an integration with their home air quality device, the Element. The Element is a smart, all-in-one environmental sensor that homeowners can use to monitor their temperature, humidity, CO2, chemicals and PM2.5 levels (any fine dust or particulate matter that is 2.5 microns in width or smaller).

### Integration with Trane Home

Homeowners have to purchase this device from Awair at [getawair.com](http://getawair.com) and then can integrate it with the Trane Home app. They can view their Awair Score right from the app and opt in to the pre-programmed automation from Trane Home. This automation uses the Awair Score to determine when the HVAC fan should run.

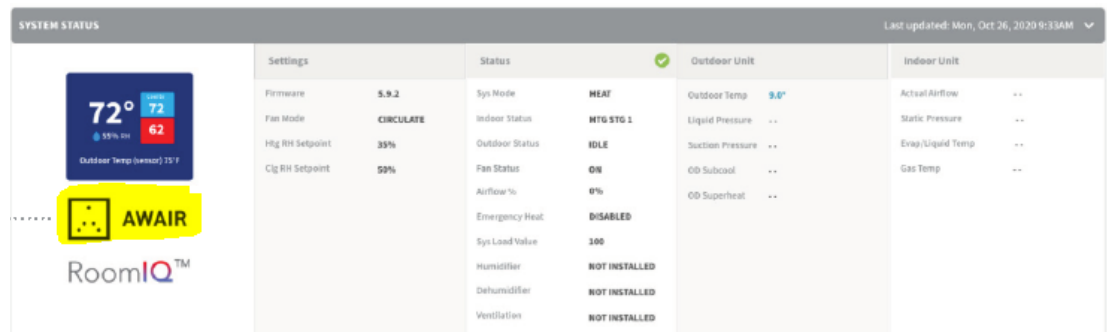

### Integration with Trane Diagnostics

When homeowners opt into Trane Diagnostics, Diagnostic Dealers will be able to:

1. See run time history and Awair data to help them pinpoint possible indoor air quality issues.
2. View the homeowner's 30 day history of Awair scores alongside the HVAC values to gain a clearer picture of what may be happening when scores are low.

**NOTE:** This badge will be shown when a homeowner integrates an Awair device using the Trane Home app.

The badge will be shown for the thermostat(s) to which the homeowner has chosen to link their Awair device.

Settings	Status	Outdoor Unit	Indoor Unit
Firmware: 5.9.2	Sys Mode: HEAT	Outdoor Temp: 9.8°	Actual Airflow: --
Fan Mode: CIRCULATE	Indoor Status: NTG STO 1	Liquid Pressure: --	Static Pressure: --
Htg RH Setpoint: 35%	Outdoor Status: IDLE	Suction Pressure: --	Evap/Liquid Temp: --
Clg RH Setpoint: 55%	Fan Status: ON	OD Subcool: --	Gas Temp: --
	Airflow %: 0%	OD Superheat: --	
	Emergency Heat: DISABLED		
	Sys Load Value: 100		
	Humidifier: NOT INSTALLED		
	Dehumidifier: NOT INSTALLED
