

Compressor Color Change

eAPB2104 | February 15, 2021

IMPORTANT DATES

First Production:

As current inventory is depleted

Recently we implemented a change on all variable speed XV18 and XV20 compressors. The manufacturer is changing the color from black to blue. Many customers may never notice this change as the compressor is covered with a sound enclosure, however to address a few questions you may receive we have summarized the change below:

First Ship:

As current inventory is depleted

- This change only affects XV18 and XV20 compressors, it will not impact other models or families.
- The internal design of the compressor has not changed... it is the same compressor from the same supplier, only in a new color.
- The compressor still carries the Climatuff™ brand, and was subjected to the same testing, design, and validation that all Climatuff™ compressors must survive.
- The blue compressor color is already used today in many of our light commercial products coming from Clarksville.
- In the variable speed products, the compressor is covered with a sound enclosure and will go unnoticed by most homeowners.
