

Refrigerant Pricing – Prices subject to change at any time

HVAC Parts & Supply has developed relationships with refrigerant suppliers in an effort to meet our refrigerant needs now and in the future. As the supply of R22 diminishes, we should remain in a position to fulfill the demand of our current customer base. Although we may need to limit the quantity of the gas sold at a given price level, we believe we will be in a position to offer a higher volume at an adjusted cost. If you need volumes higher than the announced allocation, please contact Martin Soderlund or Brenda Wintheiser. We look forward to serving you!
