- ▶ Heating - -35C to 24C

Gold Fin coating gives 3x the industry standard protection against corrosive environments

- ▶ Inverter Rotary DC Compressor

Trane Introduces: industry leading technology for heating capacity at low temperatures.

Trane is proud to announce the New Ultra Low Ambient Multi Zone system. Additional sizes in this family of products will be available in the Spring of 2020.

Multi-zone systems allow the most flexibility when customizing a comfort system for your home and can provide the benefits of a zoning system without the costly additions of zoning hardware. Up to five indoor units with separate temperature zones can be connected to one outdoor unit, improving comfort and saving energy.

Multi-zone heat pumps are an affordable and energy efficient way to control the climate of individual rooms. No energy loss due to air leakage in ductwork from heating or cooling the entire duct system before the air reaches desired rooms. No expensive ductwork required. The multi-zone system adjusts to your needs, providing constant comfort and energy savings.
