

What's happening:

Based on the feedback that we have received from our business partners concerning application flexibility on our GMU/V Stud-Mount, Over the Water Heater Air Handler offering we are electing to end production and supply of the GMU/V Air Handler.

What to expect:

We will continue to supply the TMM4 and TMM5 Stud Mount, Over-the-water heater air handlers for the foreseeable future. The TMM4 and TMM5 are intended for use in multi-family new construction and replacement applications. However, the plan is to sell through any existing stock of GMU/V Air Handlers and convert any existing quotes over to TMM4 and TMM5 respectively. For any project work that is underway, the team is working to identify those projects and make sure that there is product continuity through completion of the construction schedule. **Current orders in the system for GMU/V products where no supply is available will be canceled.**

The TMM4 and TMM5 products are available now to order. Corresponding system ratings continue to be available and accessible via the ahri directory.

GMU/V LAST ORDER DATE: OCTOBER 2, 2020
